References Category:Autodesk softwareQ: Uniformly Continuous but not Lipschitz I need to find an uniformly continuous function  $f:I \rightarrow \mathbb{R}$  which is not Lipschitz on  $I$ . Attempt: Since  $I$  is bounded, the function  $f$  is bounded so there exists  $M \in \mathbb{R}$  such that  $|f(x)| \leq M$  for every  $x \in I$ . How can I show that  $f$  is uniformly continuous? A: You can take the function  $f(x) = \begin{cases} 0 & \text{if } x \leq 0 \end{cases}$
